

Task 1 - Algorithm Design	1
Task 2: Flowchart	1
Task 3: Python OOP Code.....	1

Task 1 - Algorithm Design

1. Start the program
2. Ask the user to enter the member name
3. Ask the user to enter the rental ID
4. Create a Rental object using the member name and rental ID
5. Ask the user to enter the book name
6. Ask the user to enter the rental cost for the book
7. Add the book and its cost into the rental list
8. Calculate the total rental cost of all books
9. Display the full rental report including member name, rental ID, books rented, and total cost
10. End the program

Task 2: Flowchart

Task 3: Python OOP Code

```
1 # Community BookHub Rental Tracker
2 # This program uses Object-Oriented Programming (OOP)
3
4 # Create a class named Rental
5 class Rental:
6
7     # Constructor method to initialize attributes
8     def __init__(self, member_name, rental_id):
9         self.member_name = member_name
10        self.rental_id = rental_id
11        self.books = [] # Empty list to store rented books
12
13    # Method to add a rented book
14    def add_book(self, book_name, rental_cost):
15        self.books.append((book_name, rental_cost))
16
17    # Method to calculate total rental cost
18    def calculate_total(self):
19        total = 0
20
21        for book in self.books:
22            total += book[1]
23
24        return total
25
26    # Method to display full rental report
27    def display_report(self):
28
29        print("\n==== Community BookHub Rental Report =====")
30        print("Member Name :", self.member_name)
31        print("Rental ID   :", self.rental_id)
32
33        print("\nBooks Rented:")
34
35        for book in self.books:
36            print("-", book[0], ":", "$", book[1])
37
38        print("\nTotal Rental Cost: $", self.calculate_total())
39
40
41 # Main Program
42
43 print("=== Community BookHub Rental Tracker ===")
44
45 # Input member details
46 member_name = input("Enter member name: ")
47 rental_id = input("Enter rental ID: ")
48
49 # Create Rental object
50 rental = Rental(member_name, rental_id)
51
52 # Input book details
53 book_name = input("Enter book name: ")
54 rental_cost = float(input("Enter rental cost: "))
55
56 # Add rented book
57 rental.add_book(book_name, rental_cost)
58
59 # Display final report
60 rental.display_report()
```
