Plagiarism

Plagiarism covers both copying or paraphrasing with the source without proper understanding and citation. The source includes but is not limited to:

- Books, Journal Articles, Online resources
- Others Assignment or project
- Software program
- Images

The learners must submit their work without plagiarism while producing the evidence against the assessment criteria. They must apply proper citation and Harvard referencing. Their work must go through the Turnitin software to check for the similarity index. Please consult the relevant module instructor or mentor if you need any further advice.

Learner declaration
I certify that the work submitted for this assignment is my own and research sources are fully acknowledged.

1. Project Background

A new tourism company, TravelVista, is preparing to launch a modern website for both local and international travelers. The website has already gone through several development stages in previous units, including website planning, basic HTML and CSS structure, responsive Bootstrap layout, and JavaScript booking inquiry validation. The TravelVista website now includes multiple pages and interactive features. These include the homepage, destinations page, tour packages page, responsive navigation bar, destination cards, package cards, and a booking inquiry form with JavaScript validation. However, before the website can be shared with real users, it must be tested carefully. A website may appear complete, but it can still have problems such as broken navigation links, incorrect form validation, poor layout on small screens, browser compatibility issues, or low performance scores. To improve website quality, learners must now test the completed TravelVista Tourism Website and prepare a simple testing documentation report

2. Project Objective

Overall, the goal is to help learners understand how a completed website is checked before release. This assessment focuses on practical beginner-friendly testing and documentation skills using the same TravelVista Tourism Website project from the previous units.

3. Task 1: Testing Scope

The TravelVista Tourism Website was tested to ensure that all website pages, features, and interactive elements function correctly before the website is shared with users. Testing is important because websites may contain issues such as broken navigation links, incorrect form validation, browser compatibility problems, layout issues on smaller devices, or poor website performance.

The testing process helps improve the quality, usability, responsiveness, and reliability of the website.

The following parts of the TravelVista Tourism Website were tested:

Website Pages

- Homepage
- Destinations page
- Tour Packages page

Navigation and Links

- Navigation bar
- Cross-page navigation links
- Buttons and clickable links

Booking Inquiry Form

- Blank field validation
- Email validation
- Form submission validation
- Error message display
- Successful submission message

Responsive Layout Testing

- Mobile devices
- Tablet devices
- Desktop screens

Browser Compatibility Testing

- Google Chrome
- Microsoft Edge
- Firefox

Lighthouse Testing

- Performance
- Accessibility
- Best Practices
- SEO

4. Task 2: Simple Test Plan

Feature / Component	Testing Type	Expected Result
Homepage	Functional testing	Homepage opens correctly
Destinations/Tour Packages Page	Functional testing	Destinations/Tour pages displays properly

Navigation Bar	Functional Testing	Navigation links open correct pages
Booking Inquiry Form	Validation Testing	Form validates user input correctly
Email Validation	Validation Testing	Invalid emails are rejected
Responsive Layout	Responsive Testing	Website adjusts to different screen sizes
Browser Compatibility	Cross-browser Testing	Website works in different browsers
Lighthouse Report	Lighthouse Testing	Website receives acceptable scores

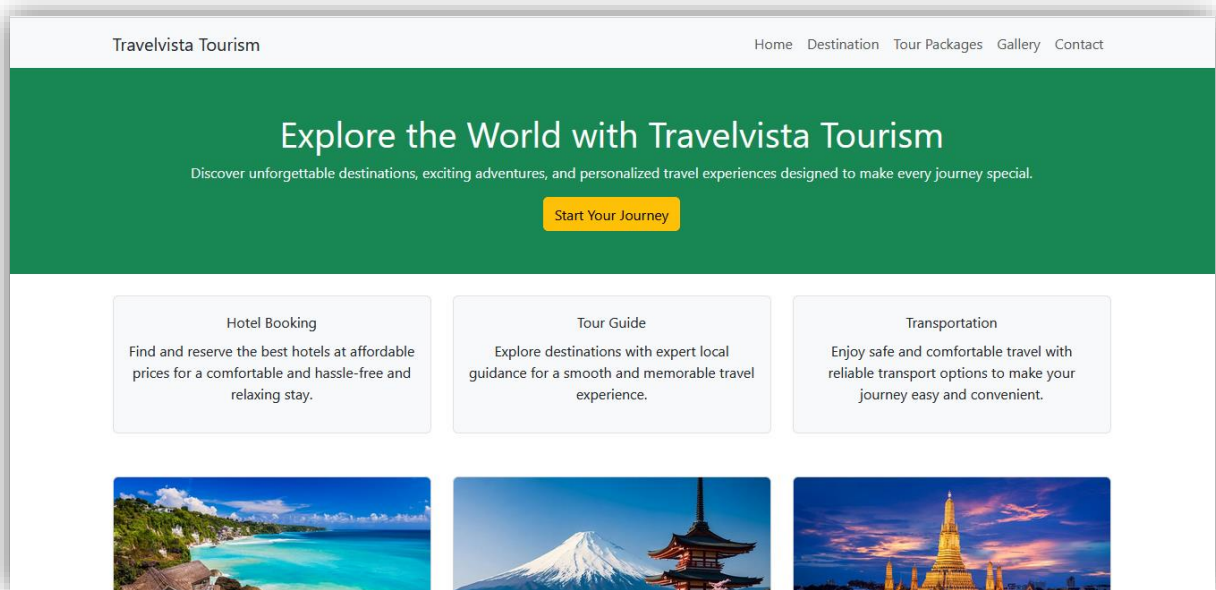

5. Task 3: Functional Testing Results

Test Case	Expected Result	Actual Result	Status
Homepage opens correctly	Homepage loads successfully	Homepage loaded correctly	PASS
Destinations page opens	Destinations page displays correctly	Page displayed correctly	PASS
Tour packages page opens	Packages page loads properly	Page loaded correctly	PASS
Navigation links work	Links open correct pages	Links functioned correctly	PASS

Navigation bar consistency	Navbar appears on all pages	Navbar displayed consistently	PASS
Buttons and links respond	Buttons work correctly	Buttons functioned properly	PASS

Screenshots Evidence

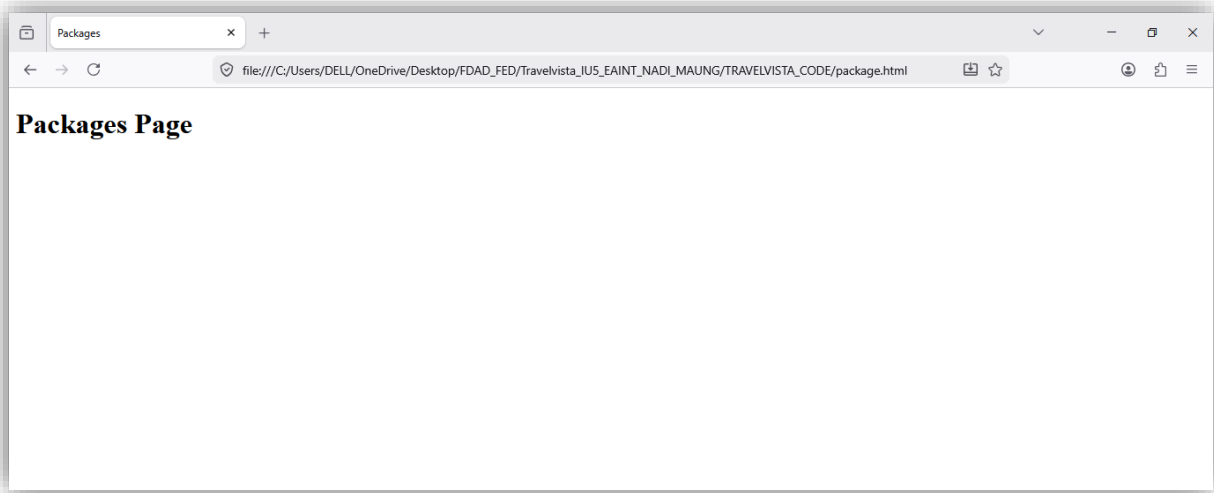

- Homepage screenshot

- Destinations page screenshot

- Packages page screenshot

- Navigation bar screenshot

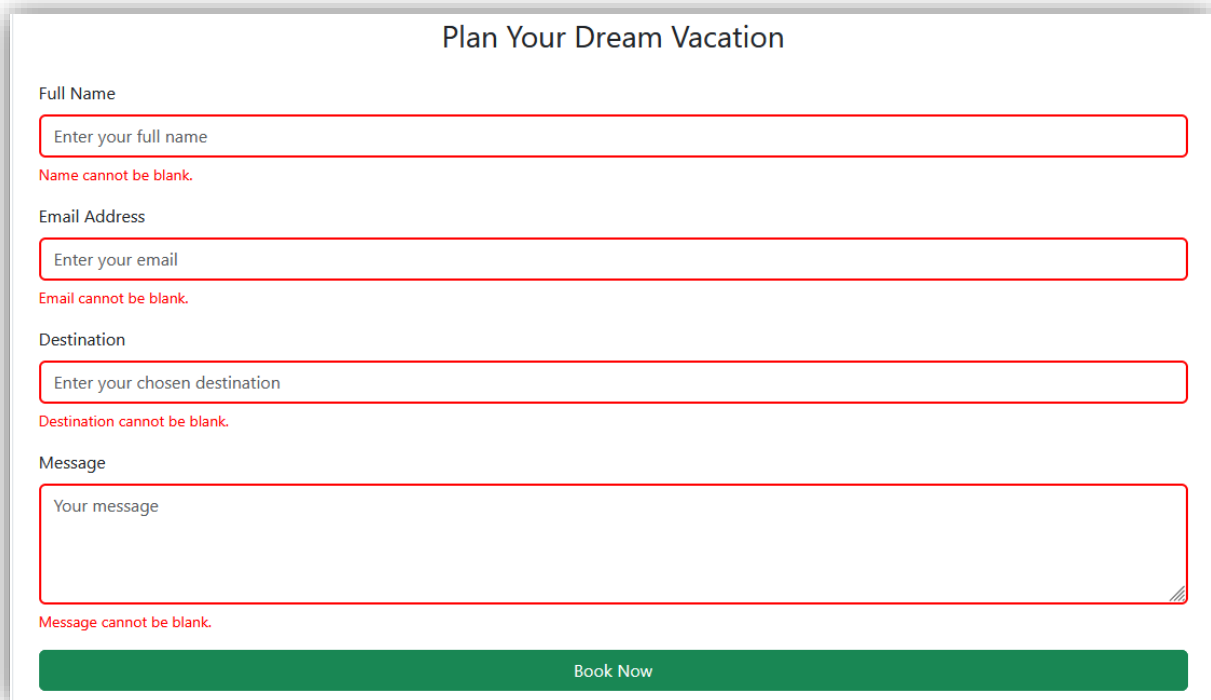

6. Task 4: Booking Inquiry Form Validation Testing

Test Scenario	Expected Result	Actual Result	Status
Blank input field	Error message displayed	Validation message displayed correctly	PASS
Invalid email format	Invalid email rejected	Input fail & Validation message displayed	PASS
Successful form submission	Form submits successfully	Form submitted successfully	PASS
Success message display	Success message appears	Success message displayed correctly	PASS
Form reset after submission	Form clears after submission	Form reset correctly	PASS

Screenshots Evidence

- Invalid validation screenshot

7. Task 5: Cross-Browser Compatibility Testing

Browser	Expected Result	Actual Result	Status
Google Chrome	Website functions correctly	Website worked correctly	PASS

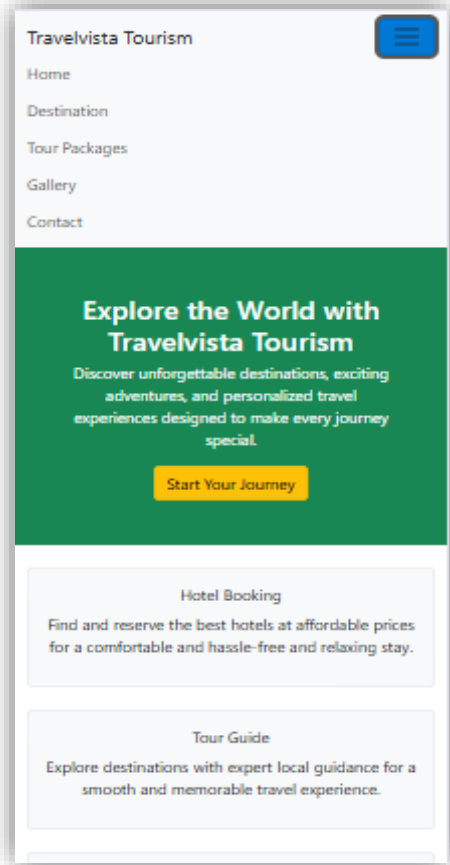

Microsoft Edge	Website functions correctly	Website functions correctly	PASS
Mozilla Firefox	Website functions correctly	Website functions correctly	PASS

8. Task 6: Responsive Layout Testing

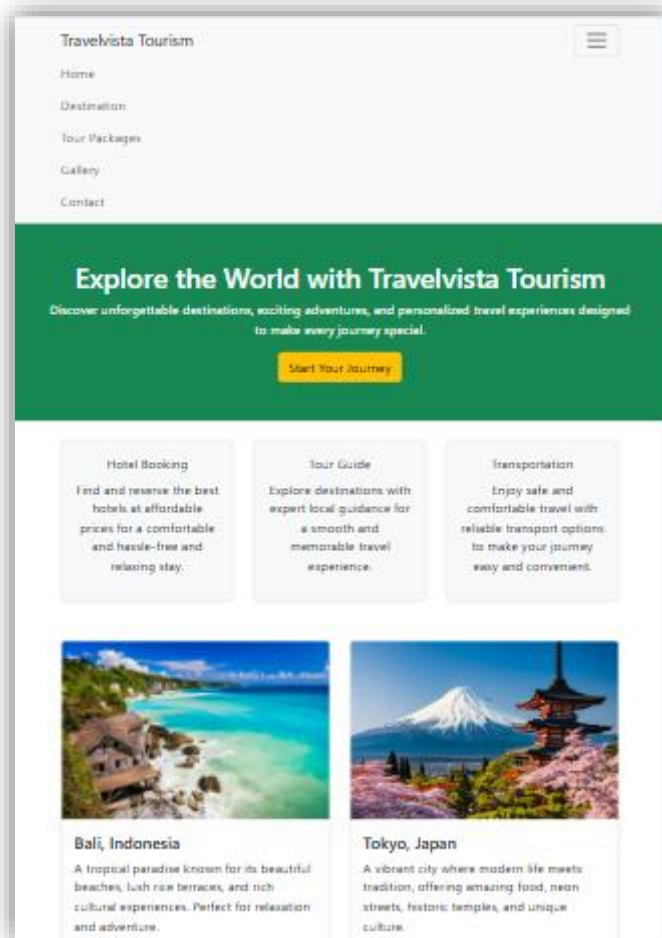

Device Type	Expected Result	Actual Result	Status
Mobile View	Layout adjusts properly	Layout displayed correctly	PASS
Tablet View	Content remains aligned	Layout displayed correctly	PASS
Desktop View	Full layout displays correctly	Layout displayed correctly	PASS

Screenshots Evidence

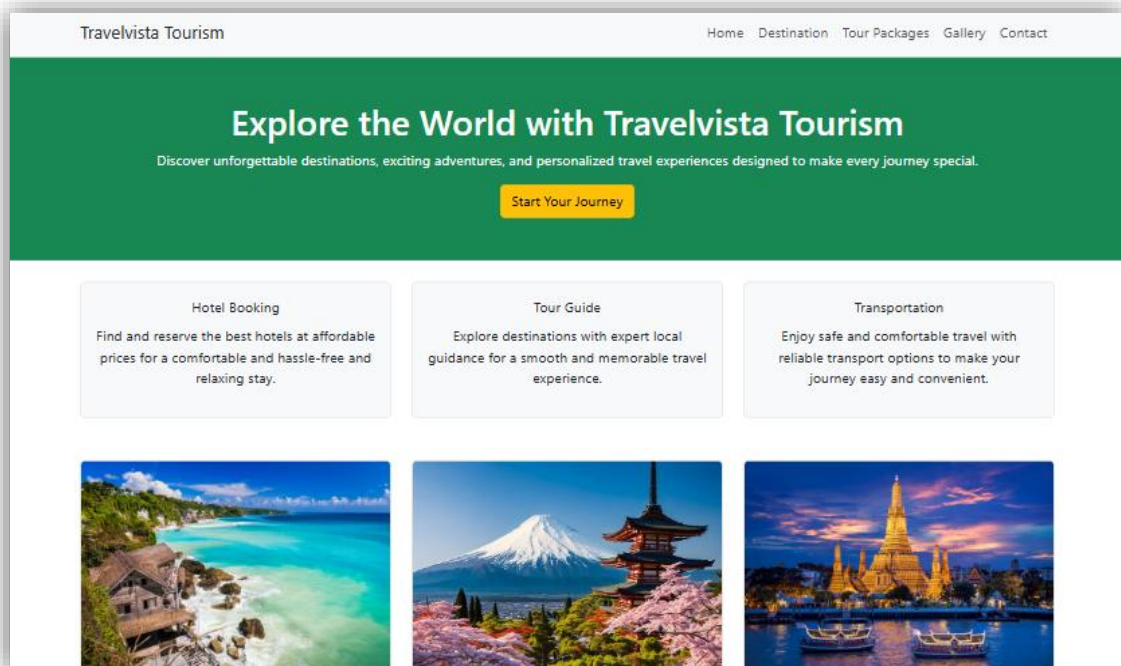

- Mobile view screenshot

- Tablet view screenshot

- Desktop view screenshot

9. Task 7: Lighthouse Testing

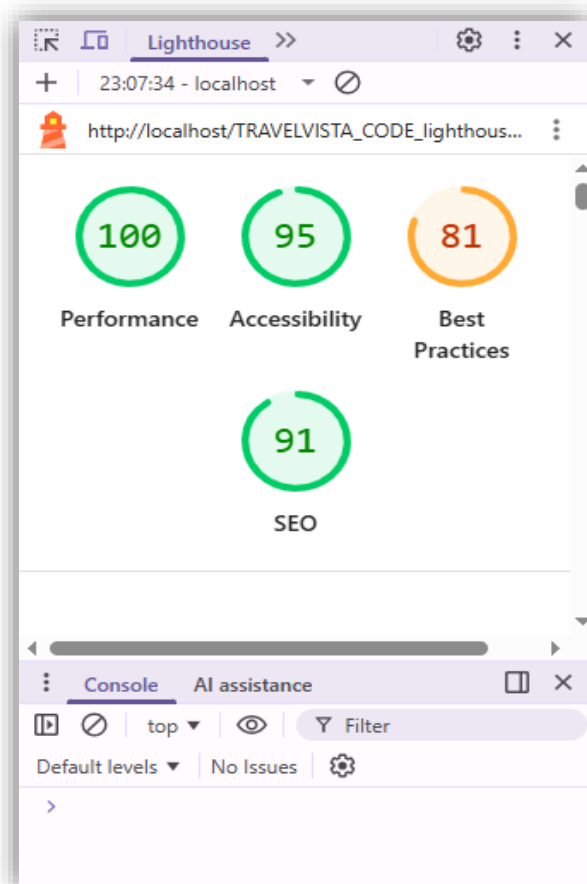

Lighthouse Category	Score
Performance	100
Accessibility	95
Best Practices	81
SEO	91

➤ Recommendation

One recommendation from the Lighthouse report is to optimize image sizes to improve website loading performance. Compressing large images can help reduce loading time and improve the user experience.

10. Task 8: Final Testing Summary

The TravelVista Tourism Website was successfully tested using multiple testing methods including functional testing, booking form validation testing, responsive testing, cross-browser compatibility testing, and Lighthouse testing.

The testing results confirmed that the website pages, navigation links, destination cards, package cards, and booking inquiry form function correctly. Responsive testing showed that the website adapts properly to mobile, tablet, and desktop screen sizes. Cross-browser testing confirmed compatibility with Google Chrome, Microsoft Edge, and Mozilla Firefox.

The booking inquiry form correctly handled invalid input and accepted valid submissions successfully. Lighthouse testing also showed acceptable website quality in terms of performance, accessibility, best practices, and SEO.

Overall, the TravelVista Tourism Website is functional, responsive, user-friendly, and ready for deployment.
